Recent advances in wireless data networking and portable information appliances have engendered a new par computing, called mobile computing, in which users carrying portable devices have access to data and inform services regardless of their physical location or movement behavior. In the meantime, research addressing in access in mobile environments has proliferated. In this survey, we provide a concrete framework and categor the various way ...

Cascading Style Sheets have been introduced by the W3C as a mechanism for controlling the appearance of HTML documents. In this paper, we demonstrate how constraints provide a powerful unifying formalism for declarative understanding and specifying style sheets for web documents. With constraints we can naturally and declaratively specify complex behavior such as inheritance of properties and cascading of conflicting style rules. We give a description of a constraint-based style ...

5 Semantic interfaces and OWL tools: How to make a semantic web browser

D. A. Quan, R. Karger

May 2004

**Proceedings of the 13th international conference on World Wide Web**

Full text available:  pdf(484.00 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Two important architectural choices underlie the success of the Web: numerous, independently operated servers provide a common protocol, and a single type of client the Web browser provides point-and-click access to the content services on these decentralized servers. However, because HTML marries content and presentation into a single representation, end users are often stuck with inappropriate choices made by the Web site designer of how to interact with and view the content. RDF metadata on the ...

6 Innovative Document Systems: The multivalent browser: a platform for new ideas

Thomas A. Phelps, Robert Wilensky

November 2001 **Proceedings of the 2001 ACM Symposium on Document engineering**

Full text available:  pdf(188.51 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The Multivalent Browser is built on a architecture that separates functionality from concrete document format. All functionality is made available via relatively small modules of code called behaviors that programmers can extend the core system. Behaviors can be as significant and powerful as parser-renderers for scanned paper, TeX DVI; as fine-grained as hyperlinks, cookies, and the disabling of menu items; and as innovative or uncommon in situ annotations, "lenses", ...

HyperScout, a Web application, is an intermediary between a server and a client. It intercepts a page to the client, gathers information on each link, and annotates each link with the discovered information. This paper reports development of *HyperScout var UniSA*, a development of the HyperScout model and application, that dramatically extends static and dynamic link annotations. Annotations provide the user with additional information, which to make better navigational choices ...

Failure-resilient, scalable, and secure read-write access to shared information by mobile and static users over and wired networks is a fundamental computing challenge. Internet-based e-services require application developers to deal explicitly with failures of the underlying software components, for example web servers, servlets, browser sessions, and so forth. This complicates application programming, and may expose failures to end users. This paper presents a framework for an application-independent infrastructure that provides recovery guarantees and masks almost all system failures, thus relieving the application programmer from having to deal with these failures ...

Modern networks are extremely complex, varying both statically and dynamically. This complexity and dynamism greatly increased when the network contains mobile elements. A number of researchers have proposed solutions to these problems based on dynamic adaptation to changing network conditions and application requirements. This paper summarizes the results of several such projects and extracts several important general lessons learned about data flows over difficult network conditions ...

### 14 Accordion summarization for end-game browsing on PDAs and cellular phones

Orkut Buyukkokten, Hector Garcia-Molina, Andreas Paepcke

We demonstrate a new browsing technique for devices with small displays such as PDAs or cellular phones. We concentrate on end-game browsing, where the user is close to or on the target page. We make browsing more efficient and easier by Accordion Summarization. In this technique the Web page is first represented as a short summary. The user can then drill down to discover relevant parts of the page. If desired, keywords can be highlighted and extracted automatically. We discuss our technique ...
